

AUSTRIAN INSTITUTE OF TECHNOLOGY

Markus Edlinger, Head of Professional Services at smartPM.solutions, personally oversees the Project Performance Management at AIT, "... with exceptionally high personal commitment, great PM competence and excellent technical skills."

Gerald Karolyi, Head of Business Administration & Group Controlling at AIT GmbH

REFERENCE

KEY FACTS

• STATUS QUO BEFORE

Comprehensive, opaque, Excel-based project and resource management, data reliability fluctuating

• TARGETS

Confidence in data & clear integrated project management software solution with clear statements regarding the utilization of resources

• IMPLEMENTATION SUPPORT

Integrated planning & reporting as well as project performance and utilization management. Highly flexible analysis & resource allocation using the Project Performance Management tool.

• RESULTS & LEARNINGS

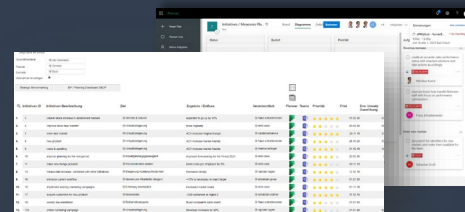

Stable and reliable database brings higher quality decisions in the project performance management. Simple and quick implementation considering the high standards for research institutes was a major concern. Independence from external consultants in the maintenance and further development of the system was achieved.

Prioritizing the right projects at the right time.

If you look at the number of ongoing projects on the AIT website, you can get dizzy. It quickly becomes clear that a good overview of all projects and project portfolios is particularly important at Austria's largest non-university research institute.

More than 500 users work with the system - especially scientists with a non-commercial background. The need for intuitive, transparent resource and cost planning with standardized reporting is therefore particularly great.

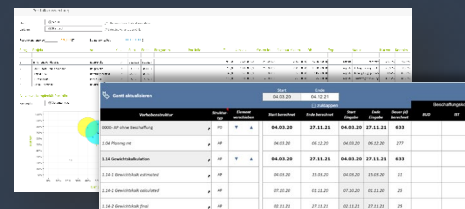

Significant time and therefore cost savings in planning and execution were realized for all ongoing projects. The increase in efficiency is enormous, e.g. current overview of the eligible costs for all funding projects. Many other functions, such as comparing scenarios, displaying costs according to funding requirements, or even fully integrating with financial planning make the difference for AIT.
